

Installation Guideline Based on Shipping Mark

To whom it may concern,

Thank you for choosing DMEGC as your business partner and using DMEGC products.

To make the color looks uniform when they are installed on the roof/project, some improvements were implemented on the shipping mark on the outside of package for different glass suppliers which are from CDF list.

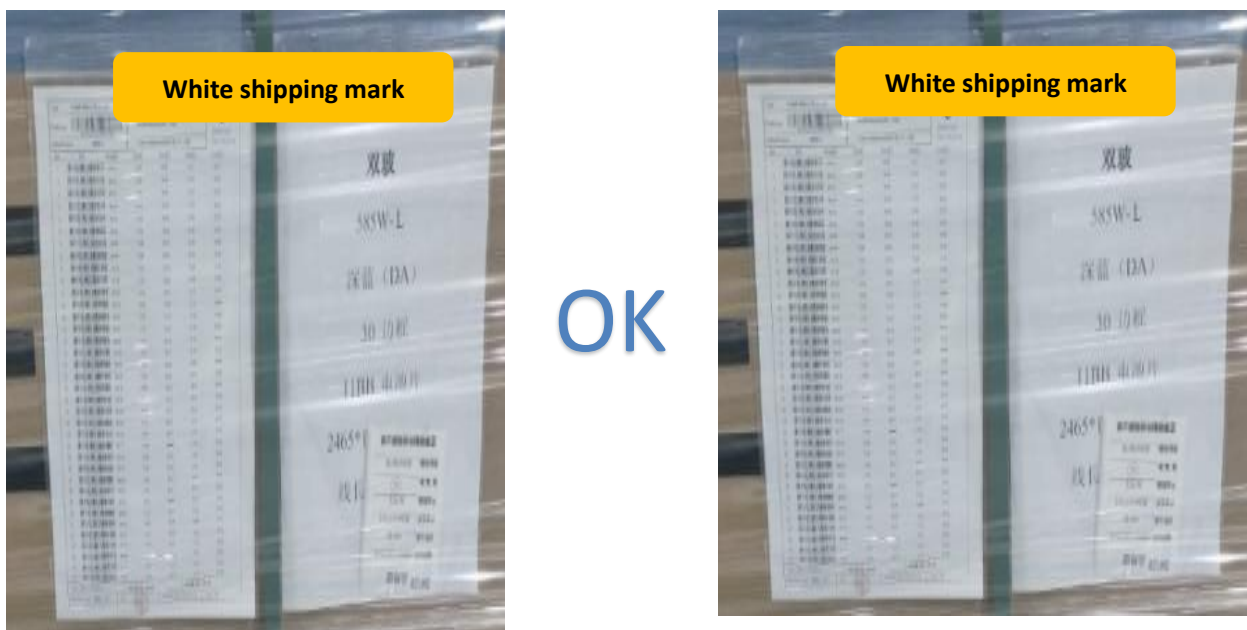

At this moment, there are two kinds of shipping mark.

- White shipping mark
- Light blue shipping mark

The modules with same color shipping mark will be delivered in one container.

As for installation, the modules with same color shipping mark are allowed to install in one roof/project to avoid color deviation due to different glass suppliers.

- Modules with white shipping mark or light blue shipping mark could be installed in one roof/ one project. See sample 1 below.
- Modules with white shipping mark could not be installed with modules with light blue shipping mark in one roof/project. See sample 2 below.

Sample 1: Modules with same color shipping mark

NG

Sample 2: Modules with different color shipping mark
